Product Description

GiANT Loaders - G2200E Electric Loader

With the Giant G2200E we introduce our first electric articulating wheel loader! The G2200E combines the best of both worlds with the advantages of an articulated loader and near-silent operation without emissions. The electric loader is ideal for working in buildings, in farm operations, on construction or demolitions sites or in urban areas.

The Giant G2200E comes standard equipped with a 260 Ah, 48V lithium-ion battery that fills the space where traditionally the engine can be found (390 Ah or 520 Ah are optional). With two separate electric motors, 6.5 kW for the drive train and 12 kW for the working hydraulics, there is always sufficient power to work precisely and efficiently. Furthermore, the machine regenerates energy when the machine brakes or drives downhill. The G2200E with regular boom has a hinge pin height of up to 111.2 inches and the X-Tra boom version has a tipping load of up to 4530 lbs.
