Product Description

GiANT Loaders - G1200TELE Telescopic Wheel Loader

With its low weight (2750 lbs), compact dimensions and excellent maneuverability, the Giant G1200 telescopic wheel loader operates with ease in tight spaces and on turf. Wide flotation tires and articulated steering make this machine very surface friendly. The powerful 25 HP 3 cylinder Kubota diesel engine drives 4 hydraulic wheel motors that have an electronically controlled anti-slip function. This machine features a high lift capacity (tipping load up to 1980 lbs), and a pin height of 111" due to its telescoping boom. The Giant G1200 Tele has a travel speed of up to 9.5 mph, which makes it fast and nimble in comparison to traditional stand-on skidsteers. The standard ROPS structure provides 360 degree visibility. This machine is equipped with a universal mini-skid attachment plate.
