Product Description

VERMEER SC30TX WALK BEHIND

The modified operator presence handle design is now manufactured with a harder exterior to improve wear and appearance. This user-friendly handle system provides additional capacitance sensing capability and is intended to help protect the operator.

Vermeer AutoSweep® system

AutoSweep monitors engine speed and automatically adjusts cutter wheel sweep rate.

Long tracks

Ground disturbance is minimized due to long tracks which provide lower ground pressure and improved stability.

Operator presence system

Control handle for the boom swing and boom raise/lower is equipped with operator presence capacitance-sensing handle. This system is intended to help protect the operator.

Smooth operation

The exclusive SmartSweep™ control system monitors engine load and provides continuous feedback, resulting in a smooth and consistent cutter wheel sweep rate.

Hydraulically-driven cutter wheel and ground drive

The elimination of belts or chain drives reduces service and maintenance.
