Product Description

2XL EGG Frame with Stainless Grid Insert for Modular Nest System

The 2XL EGG Frame with Stainless Grid Insert provides a modular outdoor kitchen foundation for the largest Big Green Egg in the lineup. Built from powder-coated aluminum and steel, the 2XL EGG Frame includes a stainless steel grid shelf insert on the lower level, integrated tool hooks on the frame sides, and four adjustable leveling feet. It positions the 2XL EGG at a comfortable cooking height and serves as the starting point for a Modular Nest outdoor kitchen that can expand with Expansion Frames and a wide selection of inserts over time.

Materials and Structural Design

The 2XL EGG Frame uses powder-coated aluminum for the upper frame sections and legs to provide weather resistance and a clean visual appearance. The lower shelf frame and cross beams are constructed from steel, which is required at the 2XL scale to handle the structural load of the 375-pound 2XL EGG at cooking height. The powder-coated finish on all components protects against corrosion, UV degradation, and the thermal cycling inherent in proximity to a high-temperature outdoor cooking appliance. All components are designed for permanent outdoor installation in exposed conditions.

Stainless Steel Grid Insert

The 2XL EGG Frame includes a stainless steel grid insert in the lower shelf frame. This ventilated shelf provides storage for accessories, charcoal, and cooking equipment below the EGG. The 304-grade stainless steel construction is corrosion-resistant and durable in outdoor conditions. The insert dimensions are standardized with the rest of the Modular Nest insert system, allowing it to be swapped for acacia wood or solid stainless steel inserts at any time without modifying the frame structure.

Tool Hooks and Leveling Feet

Integrated tool hooks on the frame sides hold Grid Grippers, Ash Tools, and other accessories within reach during cooking. At the 2XL scale, having tools accessible on the frame is particularly valuable given the size and surface area of the 2XL EGG's cooking grid and the quantity of accessories typically used during a high-volume cooking session. Four adjustable leveling feet allow the frame to be set level on any flat outdoor surface, and the feet positions are compatible with the Big Green Egg 4-inch Caster Kit for mobility.

Modular Nest System Integration

The 2XL EGG Frame connects to Expansion Frames on either side using the Modular Nest standardized connector system. Expansion Frames add counter space, lower shelf storage, and insert positions to the cooking station. The standardized module dimensions mean that the 2XL EGG Frame integrates with the same Expansion Frames and inserts used with Medium, Large, and XL EGG Frames, allowing mixed configurations in multi-unit outdoor kitchens. Starting with the 2XL EGG Frame, a complete outdoor kitchen can be built section by section without replacing the base unit as the station grows.

Specifications

Frame Width: 76 centimeters (approximately 30 inches). Frame Height: 77 centimeters (approximately 30 inches). Materials: powder-coated aluminum upper frame and legs, steel lower shelf frame and cross beams. Includes stainless steel grid insert, tool hooks, and 4 adjustable leveling feet. Compatible with Big Green Egg 4-inch Caster Kit (sold separately). Designed for the 2XL Big Green Egg. Compatible with all Modular Nest Expansion Frames and inserts.

Scaling Up Your Outdoor Kitchen

The 2XL EGG Frame reflects the scale of the 2XL Big Green Egg itself, providing a base that matches the footprint and weight demands of the largest EGG in the lineup. When cooking for large gatherings, event catering, or serious backyard entertaining, the 2XL EGG delivers the capacity needed, and the 2XL EGG Frame delivers the support structure to match. The powder-coated aluminum upper frame resists rust even when the surface is scratched, and the steel lower shelf and cross beams provide the structural rigidity required to safely support the weight of a fully loaded 2XL EGG during long cooks. Expand the setup with Expansion Frames and compatible inserts as your outdoor kitchen grows.
