Product Description

Big Green Egg Acacia Insert for Modular Nest System

The Big Green Egg Acacia Insert for the Modular Nest System is a solid acacia wood shelf panel designed for use in any EGG Frame or Expansion Frame module position in the Big Green Egg Modular Nest outdoor kitchen system. Made from solid acacia wood with galvanized screws for weathering resistance, the Acacia Insert provides a warm natural wood work surface or storage shelf in any position in the modular station. It shares the same standardized outer dimensions as all other Modular Nest inserts and is interchangeable with stainless steel grid and solid stainless steel inserts in any module position without tools or modification.

Solid Acacia Wood Construction

Acacia wood is selected for the Modular Nest insert because it is one of the hardest and most durable hardwood species available for outdoor furniture and accessory applications. The natural density of acacia gives it excellent resistance to moisture absorption, surface wear, and dimensional instability from humidity cycling, which are the primary failure modes for wood used in outdoor cooking environments. The slatted design of the Acacia Insert allows water, cooking drips, and debris to fall through the slats rather than pooling on the surface, reducing cleanup effort and preventing water from accumulating and sitting on the wood surface between sessions. The galvanized screws used to assemble the slats and frame are corrosion-resistant, which prevents rust from running down the wood face and staining the surface over time.

Standardized Dimensions and Interchangeability

The Acacia Insert shares the same outer dimensions as all other Modular Nest System inserts: the solid stainless steel insert and the stainless steel grid insert. This standardization is the fundamental design feature that makes the Modular Nest reconfigurable over time. Any insert can be placed in any upper or lower frame position in any EGG Frame or Expansion Frame module without modification, and inserts can be swapped between positions at any time by simply lifting the current insert out and placing the new one in. A Modular Nest station with multiple modules and multiple insert positions can be configured with any combination of acacia, solid stainless, and stainless grid inserts in any arrangement.

Upper and Lower Position Use

In the upper frame position of an Expansion Frame or EGG Frame, the Acacia Insert provides a warm wood counter surface for food preparation, tool staging, and serving. In the lower shelf frame position, the Acacia Insert provides a solid wood storage shelf for accessories, charcoal, or equipment below the working surface. The slatted acacia surface in both positions allows air to circulate around stored items and permits small

amounts of water to drain through rather than pooling on a flat surface.

Aesthetic and Design Integration

The Acacia Insert is the insert choice that introduces a natural wood element into a Modular Nest station otherwise composed of powder-coated aluminum and stainless steel. Many owners mix acacia inserts at upper counter positions with stainless grid inserts at lower shelf positions, creating a station with warm wood work surfaces on top and ventilated metal storage shelving below. The acacia surface matches the material and finish of Big Green Egg Acacia Tables and EGG Mates, providing a consistent aesthetic across all wood-finished components in the outdoor kitchen.

Specifications

Material: solid acacia wood with galvanized hardware. Surface type: slatted for drainage and airflow. Designed for outdoor use. Compatible with all Big Green Egg Modular Nest EGG Frames and Expansion Frames. Standardized dimensions shared with all Modular Nest inserts. Interchangeable with Stainless Steel Grid Insert and Solid Stainless Steel Insert without tools. Can be used in upper counter or lower shelf frame positions.
