Product Description

Big Green Egg Carrier for Mini EGG

The Big Green Egg Carrier for the Mini EGG is an all-metal carrier with integrated handles designed to hold the Mini EGG securely and provide a safe grip for carrying and transporting it between locations. The all-metal construction with integrated handles provides a robust grip on both sides of the Mini EGG, making it safe to carry the 39-pound Mini from a vehicle to a campsite, from storage to a tabletop cooking setup, or between any two locations where the compact EGG is being used. The Carrier is designed specifically for the Mini EGG's dimensions and integrates with the Mini's ceramic band and base.

All-Metal Construction with Integrated Handles

The Mini EGG Carrier is constructed entirely from metal, unlike the original MiniMax Carrier which incorporates plastic or composite components. The all-metal design provides greater durability and resistance to the elevated temperatures that the Mini EGG reaches at its exterior during and immediately after cooking. Integrated handles are welded directly into the Carrier structure rather than bolted on as removable components, which eliminates the risk of a handle fastener loosening under load during transport. The integrated handle geometry is designed to provide a balanced, secure grip on both sides of the Mini EGG simultaneously, keeping the EGG level and controlled during carrying.

Mini EGG Dimensions and Compatibility

The Mini EGG Carrier is sized for the Mini Big Green Egg's specific base and band dimensions. It is explicitly not compatible with the MiniMax EGG, which is a different size and uses a different Carrier designed for the MiniMax's larger base. The Mini EGG weighs 39 pounds, making it the lightest and most portable of all Big Green Egg ceramic kamado models. The Carrier enhances the Mini's portability by providing secure, ergonomic handles for safe carrying without requiring the cook to grip the EGG's ceramic surfaces directly, which can be uncomfortably hot after a cooking session and which does not provide a secure grip during transport.

Transport and Portability

The Mini EGG Carrier makes the Mini's 39-pound weight manageable for transport by providing handles that distribute the load across both hands and allow the EGG to be carried with the same control as a handled bag or case. The all-metal construction means the Carrier is not affected by the residual heat of the Mini EGG's exterior after a cooking session, which allows the EGG to be packed and moved shortly after the cooking is

finished without waiting for the Carrier itself to cool. The compact size and weight of the Mini EGG with Carrier make it one of the most genuinely portable ceramic kamado options available for cooks who want real EGG performance at remote locations.

Specifications

Material: all metal with integrated handles. Compatible with Mini Big Green Egg (39 lbs / 17.7 kg). Not compatible with MiniMax EGG. Provides secure bilateral grip for carrying and transport. All-metal construction suitable for use shortly after high-temperature cooking sessions.

Built for Transport

Unlike folding stands or lightweight alternatives, the all-metal Carrier for Mini EGG is engineered to handle repeated loading and unloading cycles without fatiguing or loosening. The integrated handles are positioned to distribute the weight of the Mini EGG evenly, making carries comfortable even over longer distances from the car to the campsite or from the kitchen to the tailgate lot. The Carrier holds the EGG securely in place, preventing movement during transport and reducing the risk of damage to the ceramic body.

Compact Cooking Anywhere

The Mini EGG is the most portable full-function charcoal grill Big Green Egg produces, and the Carrier for Mini EGG ensures that portability translates into real-world convenience. Pack it alongside your groceries and charcoal and take your Big Green Egg experience wherever the day leads, knowing the Carrier will hold your EGG safely for the journey there and back.
