**SKU:** 122247

**Categories:** [Big Green Egg](#)

### Product Description

#### Expansion Cabinet for Modular Nest System

The Expansion Cabinet for the Big Green Egg Modular Nest System adds a full module of enclosed, watertight storage to an existing Modular Nest outdoor kitchen station. Unlike the open Expansion Frame, which provides shelving with inserts on both the upper and lower levels, the Expansion Cabinet features an enclosed watertight compartment below the upper frame position, providing protected storage for charcoal, accessories, and supplies that need to be shielded from rain and outdoor moisture. The cabinet connects to EGG Frames and other Expansion Frames using the Modular Nest connector system and accepts the same range of inserts on its upper surface as all other Modular Nest modules.

#### Watertight Storage Compartment

The defining feature of the Expansion Cabinet is its enclosed, watertight lower compartment. This compartment keeps stored items dry during rain and humidity, which is a significant advantage over open shelf storage for items like charcoal bags, paper or cardboard packaging, electronic accessories like the EGG Genius temperature controller, and any other equipment that is moisture-sensitive. The watertight seal prevents rain from entering the compartment during a downpour and prevents the moisture accumulation that leads to mold and deterioration in enclosed outdoor storage spaces. The cabinet door opens to provide convenient access to the stored contents during a cooking session.

#### Dimensions and Capacity

The Expansion Cabinet measures 30 inches long by 30 inches wide by 30.5 inches high (approximately 76 by 76 by 77 centimeters) and weighs 63 pounds. This footprint matches the module dimensions of the standard Expansion Frame, which means the Expansion Cabinet integrates into any Modular Nest station in the same position where an Expansion Frame would sit, without any gaps or misalignments in the station's visual profile. The cabinet's interior provides meaningful storage capacity for charcoal bags, tools, and accessories that would otherwise need to be stored elsewhere when not in use.

## **Powder-Coated Aluminum Construction**

The Expansion Cabinet is constructed from powder-coated aluminum throughout, consistent with the other components in the Modular Nest System. The powder-coat finish provides corrosion resistance and UV durability appropriate for permanent outdoor installation. The aluminum construction keeps the weight of the cabinet manageable despite its enclosed structure, and the finish integrates visually with adjacent EGG Frames and Expansion Frames in the modular station.

## **Upper Insert Compatibility**

The upper surface of the Expansion Cabinet accepts the same standardized Modular Nest inserts as all other Modular Nest modules. Acacia wood, stainless steel grid, and solid stainless steel inserts can all be placed in the upper frame position of the Expansion Cabinet, allowing the counter surface above the storage compartment to be configured to the cook's preference. This means the Expansion Cabinet contributes both enclosed storage below and configurable counter space above to the outdoor kitchen station.

## **Placement in the Modular Nest Station**

The Expansion Cabinet is designed to be placed at any position in a Modular Nest station where a module with enclosed storage is needed. A common configuration places the Expansion Cabinet at one end of a multi-module station for charcoal and accessory storage, with Expansion Frames filling the counter positions between the EGG Frame and the cabinet. Another common configuration places the Expansion Cabinet adjacent to the EGG Frame for immediate access to frequently used items during cooking. The modular connector system allows the cabinet to be placed at any position in the station and repositioned later if the layout needs to change.

## **Specifications**

Dimensions: 30 inches long x 30 inches wide x 30.5 inches high (approximately 76 x 76 x 77 centimeters).  
Weight: 63 pounds. Material: powder-coated aluminum. Storage type: watertight enclosed compartment.  
Upper position accepts all standardized Modular Nest inserts. Connects to EGG Frames and Expansion Frames using Modular Nest connector hardware. Compatible with all Big Green Egg Modular Nest System components.
