Product Description

Big Green Egg intEGGrated Nest+Handler for 2XL EGG

The Big Green Egg intEGGrated Nest+Handler for the 2XL EGG is a heavy-duty galvanized steel base and repositioning system designed for the 375-pound 2XL Big Green Egg. It positions the 2XL at a comfortable standing cooking height on any flat outdoor surface and provides integrated handles and caster wheels that allow the entire assembly to be rolled to a new position by a single person using the Handler's ergonomic design. Given the exceptional weight of the 2XL EGG, the intEGGrated Nest+Handler is the essential mobility solution for any 2XL installation that may need to be repositioned.

Heavy-Duty Construction for the 2XL

The intEGGrated Nest+Handler for the 2XL is constructed with structural dimensions and material specifications appropriate for supporting the 375-pound 2XL EGG safely at cooking height and through repositioning operations. The galvanized steel frame provides corrosion resistance in outdoor conditions without relying on surface coatings that can deteriorate. The welded construction is rigid and free from fasteners that could loosen over time with thermal cycling and use. The base is designed to distribute the 2XL's weight across the caster contact points to prevent sinking into soft patio surfaces during extended stationary cooking sessions.

Integrated Handles

The Handler handles are integrated into the upper portion of the Nest structure and are sized and positioned for the ergonomics of managing the 375-pound 2XL EGG assembly on casters. Gripping both handles and tilting the Nest+Handler forward engages the casters and allows the assembly to be rolled on flat surfaces with manageable effort. The handle height and angle are designed to provide mechanical advantage rather than requiring direct lifting of the EGG's weight. On the 2XL, the Handler is not a casual repositioning tool but an essential safety system that prevents the need to apply uncontrolled lateral force to the 2XL EGG's ceramic shell during movement.

Casters and Stability

The caster wheels on the 2XL intEGGrated Nest+Handler are heavy-duty components rated for the 2XL's considerable weight. Locking casters secure the unit in position during cooking. Given the 2XL's weight and the potential consequences of unintended movement during a high-temperature cooking session, the locking mechanism on the 2XL Nest+Handler casters should always be engaged when the EGG is in use.

Specifications

Material: galvanized steel. Includes integrated lift handles and heavy-duty caster wheels with locking mechanisms. Compatible with 2XL Big Green Egg (375 lbs / 170 kg). Positions EGG at comfortable standing cooking height. Designed for flat patio and deck surfaces.

Managing the 2XL EGG Safely

The 2XL Big Green Egg is the largest kamado in the lineup and one of the heaviest. Moving it without a proper carrying system is impractical and potentially unsafe given the weight of the ceramic body alone. The IntEGGrated Nest+Handler for 2XL EGG incorporates built-in handles into the nest structure, giving two people a secure, comfortable grip for lifting and transporting the EGG when necessary. Setup changes, off-season storage prep, and event configurations all become manageable tasks with the right carry system in place.

Casters for Practical Daily Mobility

Beyond carrying, the built-in casters allow the 2XL EGG to be rolled into position for each cook without lifting. Position the EGG on your patio or outdoor cooking space, lock the caster wheels, and cook with confidence knowing the heavy ceramic body is fully supported and stationary throughout the session. After the cook, unlock the casters and roll the EGG to a storage or cleaning position with minimal effort.

The Right Foundation for Serious Cooking

Anyone investing in the 2XL Big Green Egg is typically cooking at scale, whether for large family gatherings, catering scenarios, or competition barbecue. The IntEGGrated Nest+Handler for 2XL EGG provides the support, mobility, and portability infrastructure that serious cooking at this scale demands, making it the natural first accessory purchase alongside the EGG itself.
