Product Description

Big Green Egg intEGGrated Nest+Handler for Medium EGG

The Big Green Egg intEGGrated Nest+Handler for the Medium EGG combines a sturdy floor-standing base with integrated lift handles and caster wheels into a single unified system. It positions the Medium EGG at a comfortable cooking height on any flat outdoor surface and provides the handles needed to safely tilt and roll the EGG to a new location without lifting or disassembling the unit. The galvanized steel construction provides durability in outdoor conditions, and the integrated design eliminates the separate assembly steps required when a Nest and Handler are purchased as individual components.

Galvanized Steel Construction

The intEGGrated Nest+Handler is constructed from galvanized steel, which provides excellent corrosion resistance in outdoor environments without requiring a painted or powder-coated finish that can chip or peel over time. Galvanization protects the steel through a zinc coating applied to the surface at the molecular level, making it durable through repeated cycles of rain, heat, and humidity. The heavy-duty welded construction of the Nest base provides the structural rigidity needed to support the 114-pound Medium EGG at cooking height without flexing or racking.

Integrated Handle System

The Handler component consists of robust handles integrated into the upper portion of the Nest structure. These handles allow one person to grip both sides of the EGG base and tilt the unit to roll it on its caster wheels to a new position. The handles are designed at a height and angle that makes this operation ergonomic and safe, even on slightly uneven surfaces. The handle geometry ensures that the EGG remains balanced and under control during repositioning, and the caster wheels make movement on flat patio or deck surfaces smooth and effort-free. The handles also serve as a visual design element that gives the intEGGrated Nest+Handler its distinctive appearance within the Big Green Egg product line.

Caster Wheels for Mobility

Large, sturdy caster wheels are integrated into the base of the Nest+Handler, allowing the Medium EGG to be rolled to different positions on a flat outdoor surface. The casters are heavy-duty and rated to handle the combined weight of the Nest+Handler and the Medium EGG through repeated repositioning cycles. Locking mechanisms on the casters hold the unit in position during cooking sessions when movement is not desired. The casters can be locked individually to stabilize the unit on surfaces with slight gradients.

Comfortable Cooking Height

The Nest+Handler positions the Medium EGG at a standing working height suitable for adults of average stature. This cooking height allows comfortable access to the EGG dome handle and cooking grid without bending, which reduces fatigue during extended cooking sessions. The height also positions the draft door at the EGG base at a comfortable level for vent adjustments. For cooks who use the Medium EGG frequently and for extended sessions, the proper cooking height provided by the Nest+Handler makes a meaningful difference in the cooking experience compared to using the EGG at an improper height.

Specifications

Material: galvanized steel. Includes integrated lift handles and large caster wheels with locking mechanisms. Compatible with Medium Big Green Egg. Positions EGG at comfortable standing cooking height. Designed for outdoor use on flat patio and deck surfaces.

Practical Convenience for Every Cook

The IntEGGrated Nest+Handler for Medium EGG eliminates the need for separate lifting tools or awkward repositioning during a cook. Because the handles are built directly into the nest, moving the EGG is a two-person operation that can be done safely and confidently, even when the grill is warm. This is particularly useful when setting up for different cooking methods, rearranging your patio layout, or bringing the EGG to a different area for a specific event. The integrated design also keeps the overall footprint compact, making it a natural choice for patios, balconies, or any cooking space where efficiency of space matters.
