Product Description

Large Corner Modular Nest

The Large Corner Modular Nest is a 90-degree angle frame that positions the Large Big Green Egg at the corner junction of an L-shaped outdoor kitchen layout. Constructed from powder-coated aluminum and including five adjustable levelers, it is compatible with optional 4-inch casters and integrates with the complete Big Green Egg Modular Nest System. Expansion Frames connect to either leg of the Corner Nest to extend the kitchen in both directions from the corner. The Large Corner Modular Nest is designed for outdoor cooking spaces where an L-shaped layout makes the most efficient use of available area, with the Large EGG anchoring the corner as the primary cooking appliance.

Corner Configuration

The Corner Modular Nest positions the Large EGG at the inside corner of a right-angle modular station. The two legs of the frame extend outward from the corner perpendicularly, creating the junction point from which both arms of an L-shaped outdoor kitchen can be built. This layout is effective for kitchens arranged along two adjacent walls, for corner placements on a patio or deck, and for any outdoor cooking space where a linear station does not make good use of the available corner space. The Large Corner Modular Nest holds the Large EGG at a comfortable cooking height at the corner and allows the cook to access the EGG from the inside angle of the L, which is typically the most natural working position in a corner kitchen setup.

Powder-Coated Aluminum Construction

The Large Corner Modular Nest is constructed from powder-coated aluminum, providing corrosion resistance, weather durability, and a finish consistent with other Modular Nest System components. The powder-coat finish protects against UV exposure and moisture in outdoor conditions. All Modular Nest frames share the same powder-coat finish specification, so the Corner Nest integrates visually with adjacent Expansion Frames and EGG Frames.

Five Levelers and Caster Compatibility

Five adjustable levelers distributed across the Corner Frame allow it to be precisely leveled on any flat outdoor surface. Proper leveling at the corner frame is important because both legs of the L-shaped system are anchored to the Corner Nest, and any tilt in the corner unit propagates through the connected Expansion Frames. The leveler positions are also compatible with optional 4-inch casters, which can replace the levelers to make the station mobile when the cooking location needs to change.

Modular Nest System Integration

The Large Corner Modular Nest uses the same connector system as all Modular Nest components, allowing Expansion Frames and inserts to be added to either leg of the corner without compatibility issues. All standard Modular Nest inserts fit into the insert positions of the Corner Nest frame and any connected Expansion Frames. An outdoor kitchen starting with the Large Corner Modular Nest can grow incrementally by adding Expansion Frames and inserts to either leg over time.

Specifications

Configuration: 90-degree corner frame. Material: powder-coated aluminum. Levelers: 5 included. Optional casters: compatible with 4-inch (10.2 cm) Big Green Egg Caster Kit (sold separately). Compatible with Large Big Green Egg. Connects to all Modular Nest Expansion Frames and inserts. Dimensions: consult product documentation for specific measurements.

Outdoor Durability Built to Last

The powder-coated aluminum construction of the Large Corner Modular Nest is chosen specifically for outdoor cooking environments. Aluminum does not rust, and the powder coating provides an additional layer of protection against UV exposure, grease, and the rigors of regular outdoor use. Even if the surface finish sustains minor scratches over time, the frame underneath remains structurally sound and rust-free. This durability means your investment in the Modular Nest System stays looking and performing well season after season, with minimal maintenance required beyond occasional cleaning.

The five included levelers make it straightforward to achieve a stable, balanced surface even on slightly uneven patio pavers, deck boards, or concrete. Once leveled and locked, the frame holds firm during cooking, eliminating any wobble or shift during heavy use. Add optional casters to gain the ability to roll the entire corner assembly for cleaning or repositioning, then lock the wheels before each cook.
