Product Description

Big Green Egg Modular EGG Mate

The Big Green Egg Modular EGG Mate is a solid acacia wood side shelf that integrates directly with the Big Green Egg Modular Nest System to provide additional counter space adjacent to the EGG. At 16 by 25 inches (40.6 by 63.5 centimeters) and with a weight capacity of 40 pounds (18.1 kilograms), the Modular EGG Mate offers a substantial working surface for food preparation, plating, and tool staging during cooking sessions. When not in use, the Modular EGG Mate folds vertically against the Modular Nest frame, preserving patio space without requiring removal. The screw-free top surface maintains the clean aesthetic of the acacia wood and integrates visually with other acacia components in the Modular Nest System.

Solid Acacia Wood Construction

The Modular EGG Mate is built from solid acacia wood, the same material used in Big Green Egg's Acacia Table, Acacia Insert, and traditional EGG Mates. Acacia's natural density, moisture resistance, and durability in outdoor conditions make it the appropriate material for a work surface that will be exposed to weather, cooking liquids, and repeated use over years of outdoor cooking. The solid construction without lamination or engineered wood core means the Modular EGG Mate maintains its structural integrity as the wood weathers, and it can be refreshed periodically with a food-safe wood oil to maintain the natural color and surface protection.

16 x 25-Inch Surface with 40-Pound Capacity

The 16-inch depth and 25-inch width of the Modular EGG Mate's surface provide meaningful working space adjacent to the EGG. At 16 by 25 inches, the Mate accommodates a full cutting board, a seasoning and sauce staging area, or several cooked portions resting before slicing. The 40-pound weight capacity is sufficient for a full platter of food, a cutting board with ingredients, or a collection of tools and accessories during a cooking session. The combination of surface area and weight capacity makes the Modular EGG Mate genuinely useful rather than a nominal side surface.

Fold-Vertical Design for Space Efficiency

When not actively in use, the Modular EGG Mate folds vertically against the Modular Nest frame, which reduces the horizontal footprint of the Modular Nest station significantly in areas where the patio or deck space is limited. The fold-vertical design allows the Modular EGG Mate to stay attached to the Modular Nest frame in the folded position without requiring removal and storage elsewhere. Moving the Modular EGG Mate from the folded position to the working position is quick and can be done with one hand, which makes it practical to deploy and retract the Mate as needed during a cooking session rather than leaving it in one position permanently.

Screw-Free Top Surface

The top surface of the Modular EGG Mate is screw-free, which means there are no fastener heads interrupting the working surface that could catch on a cutting board or food item placed on the Mate. The screw-free design also contributes to the clean, contemporary aesthetic of the Modular EGG Mate and distinguishes it from traditional EGG Mates that use visible hardware on the top surface. The connections between the acacia wood slats and the Mate's frame are made through methods that keep the top surface uninterrupted.

Modular Nest System Compatibility

The Modular EGG Mate is designed to integrate with the Big Green Egg Modular Nest System, attaching to the EGG Frame or Expansion Frame rail positions. It can be mounted on either side of any module in the Modular Nest station and can be repositioned along the station's length as the outdoor kitchen layout evolves. Multiple Modular EGG Mates can be mounted on a single Modular Nest station for maximum side surface coverage.

Specifications

Material: solid acacia wood. Dimensions: 16 inches x 25 inches (40.6 cm x 63.5 cm). Weight capacity: 40 lbs (18.1 kg). Surface: screw-free top. Folds vertically when not in use. Compatible with Big Green Egg Modular Nest System EGG Frames and Expansion Frames. Designed for outdoor use.
