Product Description

Big Green Egg Portable Nest for MiniMax EGG

The Big Green Egg Portable Nest for the MiniMax EGG is a folding powder-coated steel stand that raises the MiniMax to a comfortable cooking height of 36 inches (91.4 centimeters) for outdoor cooking at any location. The folding leg design allows the Nest to collapse flat for compact storage and transport alongside the MiniMax. Quick-release clips secure the MiniMax in the Nest during cooking and allow fast removal for transport. Rubber-padded legs provide stable contact with outdoor surfaces from campgrounds to concrete patios. The Portable Nest is the essential complement to the MiniMax's portability, turning the compact EGG into a self-contained outdoor cooking station at any location with a flat surface.

Folding Design for Transport and Storage

The Portable Nest's legs fold flat for compact storage and transport. In the folded position, the Nest can be stowed alongside the MiniMax EGG in a vehicle cargo area, carried through doorways and down stairs, or stored in a closet or garage between uses without taking up significant space. The folding mechanism is designed for repeated opening and closing cycles without loosening or binding, and the Nest assembles to its full height quickly without tools or hardware. For a portable cooking setup that needs to be packed and unpacked regularly, the folding design reduces the time and effort required at the beginning and end of each cooking session.

36-Inch Cooking Height

The Portable Nest raises the MiniMax EGG to 36 inches (91.4 centimeters), which is a comfortable standing working height for outdoor cooking. This height allows access to the dome handle, draft door, and cooking grid at a natural standing position without stooping, which reduces fatigue during extended cooking sessions. The 36-inch height is well suited to outdoor cooking contexts including tailgates, campsites, patios, and rooftop terraces where the Nest may be the only elevated cooking surface available.

Quick-Release Clips and Stability

Quick-release clips secure the MiniMax EGG carrier to the Portable Nest during cooking and release quickly for transport or repositioning. These clips prevent the MiniMax from shifting in the Nest during cooking, which is important when operating on slightly uneven surfaces where the EGG might otherwise rock. The rubber-padded legs on the Portable Nest provide stable contact with a wide variety of outdoor surfaces, including wood decking, concrete, asphalt, and compacted gravel. The rubber pads prevent the metal leg ends from scratching or damaging wood deck surfaces.

Compatible with EGG Mates

The Portable Nest is compatible with optional Solid Acacia EGG Mates sized for the MiniMax (13.5-inch format, sold separately). Mounting EGG Mates on the Portable Nest creates a compact but fully functional outdoor cooking station with integrated prep surfaces on both sides of the MiniMax. This configuration is particularly useful at tailgates and outdoor events where counter space is otherwise limited.

Specifications

Material: powder-coated steel. Cooking height: 36 inches (91.4 centimeters). Folding design for compact storage and transport. Includes quick-release clips for MiniMax carrier attachment and rubber-padded legs. Compatible with MiniMax Big Green Egg. Compatible with optional Solid Acacia EGG Mates 13.5-inch for MiniMax (sold separately).

The Ideal Partner for MiniMax Portability

The MiniMax Big Green Egg is designed to be taken places, and the Portable Nest is designed to support that mission. Rather than cooking directly on a table surface or improvising a stable base, the Portable Nest gives you a secure, proper stand that keeps the EGG at the right height and provides a stable footprint on any surface. Set up camp, open the nest, place the MiniMax, and you have a complete outdoor cooking station ready to go in minutes. When the cook is done, collapse the nest, pack it alongside the MiniMax, and leave no footprint behind.
