Product Description

Big Green Egg Table Nest for Medium EGG

The Big Green Egg Table Nest for the Medium EGG is the required mounting component for any installation of the Medium EGG in a Big Green Egg table, a custom outdoor kitchen countertop, or any other flat surface through which the EGG is built in. The Table Nest is a metal cradle that elevates the EGG above the table surface, creating the airflow gap beneath the EGG needed for safe heat dissipation and proper draft airflow to the bottom vent. Without the Table Nest, the Medium EGG would rest directly on the table surface, which creates a fire risk and blocks the draft door that controls cooking temperature. The Table Nest ensures the EGG sits at the correct height for safe and functional built-in use.

Purpose and Necessity

The Table Nest serves two critical functions in any Big Green Egg table or built-in installation. The first is heat protection: the EGG generates significant heat at its base and lower band during high-temperature cooking, and direct contact between the EGG base and a wood or composite table surface creates a fire risk. The Table Nest lifts the EGG base above the table surface, allowing the heat to dissipate into the surrounding air rather than transferring into the table material. The second function is airflow: the Table Nest's metal stand creates a gap between the EGG base and the table opening that allows outside air to reach the bottom draft door freely. Restricting airflow to the draft door reduces the cook's ability to control temperature accurately and can cause the EGG to run hotter than the vent position would suggest.

Metal Construction for Heat Exposure

The Table Nest is constructed from metal appropriate for continuous proximity to a high-temperature cooking appliance. Unlike the wood or composite materials used in EGG tables, the Table Nest's metal construction is not affected by the thermal cycling that the EGG undergoes during normal cooking sessions. The metal can be cleaned with a damp cloth when cooking residue accumulates on the surface, and it requires no periodic treatment or maintenance to maintain its structural integrity and function.

Not a Standalone Stand

The Table Nest is explicitly not designed for use as a standalone floor support for the Medium EGG. It must be used within a table, countertop, outdoor kitchen island, or custom surround that provides lateral support around the EGG opening. The Table Nest supports the EGG vertically within the opening but does not provide the lateral stability that a Nest or intEGGrated Nest+Handler provides. Placing the Table Nest on a flat surface without a surrounding table structure and using it as a standalone stand for the EGG is unsafe and will

not provide stable support for the Medium EGG's 114-pound weight.

Compatible Tables and Surrounds

The Table Nest for Medium EGG is designed for use with the Big Green Egg Acacia Hardwood Table for the Medium EGG and any custom outdoor kitchen countertop or island with an opening sized for the Medium EGG. It can also be integrated into worktops and kitchen islands where the EGG is built in permanently. The Table Nest can be cleaned with a damp cloth and does not require removal from the table opening for routine maintenance.

Specifications

Material: metal (steel). Compatible with Medium Big Green Egg. Required for all table and built-in Medium EGG installations. Not suitable for use as a standalone stand. Can be integrated into worktops and outdoor kitchen islands. Cleanable with a damp cloth. Provides airflow beneath EGG and heat protection for surrounding table surfaces.

The Table Nest for Medium EGG delivers reliable in-table support that lets you build the outdoor kitchen your cooking style deserves.
