Product Description

Big Green Egg Table Nest for XL EGG

The Big Green Egg Table Nest for the XL EGG is the required mounting component for any installation of the XL EGG in a Big Green Egg Acacia Hardwood Table, a Modern Farmhouse Table, a custom outdoor kitchen countertop, or any other flat-surface built-in application. The Table Nest elevates the XL EGG above the table surface to create the airflow gap needed for safe heat dissipation and unrestricted access to the bottom draft door. It is a required safety and performance component for all XL EGG table installations and is not suitable for use as a standalone floor support.

Required for All XL Table Installations

The XL EGG's 219-pound weight and the heat it generates at its base during high-temperature cooking sessions make the Table Nest a non-optional component for any table installation. Without the Table Nest, the XL EGG would rest directly on the table surface, blocking the draft door and transferring heat directly into the wood or composite table material. The Table Nest's metal stand creates the necessary clearance beneath the EGG for both airflow and heat dissipation, allowing the draft door to operate freely and protecting the surrounding table structure from heat damage.

Metal Construction for the XL Scale

The XL Table Nest is constructed from metal proportioned for the XL EGG's larger base diameter and greater weight compared to the Medium and Large EGG Table Nests. The metal construction is appropriate for the thermal environment created by the XL EGG during high-temperature cooking sessions and requires no maintenance beyond cleaning with a damp cloth when cooking residue accumulates. The Table Nest can be installed in any table or countertop opening sized for the XL EGG and is compatible with custom outdoor kitchen surrounds and islands built from non-combustible materials.

Integration with Big Green Egg Tables

The XL Table Nest is included in the Big Green Egg Acacia Hardwood Table for XL EGG package and the XL Modern Farmhouse Table packages. When purchased separately, it provides the mounting component for custom outdoor kitchen projects where the table or surround is built by a contractor. Big Green Egg specifies the Table Nest as a required component for all XL EGG table installations and does not recommend any alternative mounting approach that would omit the Table Nest's heat protection and airflow gap functions.

Specifications

Material: metal (steel). Compatible with XL Big Green Egg. Required for all table and built-in XL EGG installations. Not suitable for use as a standalone stand. Can be integrated into custom outdoor kitchen islands and worktops built from non-combustible materials. Cleanable with a damp cloth.

Sinking the XL EGG Into Your Outdoor Kitchen

In-table installation transforms the XL Big Green Egg from a standalone appliance into an integrated outdoor kitchen centerpiece. The Table Nest for XL EGG makes this installation possible by providing the support system that holds the XL EGG securely within a compatible table cutout. Once installed, the EGG's cooking surface sits at a convenient height relative to the surrounding table surface, and the integrated look elevates the overall appearance of the outdoor cooking space.

Supporting the Weight of the XL EGG

The XL Big Green Egg is a heavy piece of equipment, and in-table installation places the full weight of the ceramic body on the table's support structure via the Table Nest. The Table Nest for XL EGG is engineered to distribute this weight appropriately and keep the EGG secure in the table cutout through heating and cooling cycles, vibration, and daily use. Proper support is critical for protecting both the EGG and the surrounding table structure.

Professional Outdoor Kitchen Results

Using the Table Nest for XL EGG as part of an outdoor kitchen build delivers a result that looks professionally designed and functions like a purpose-built outdoor cooking facility. Combined with adjacent prep surfaces, storage, and complementary Big Green Egg accessories, the in-table XL EGG becomes the high-capacity centerpiece of a serious backyard cooking setup.
